Re: **WATER-SUPPLY SURVEY**  
Statesville Boulevard  
Salisbury, Rowan County, North Carolina  
Parcel ID # 329 407

Dear Property Owner:

The Inactive Hazardous Sites Branch (IHSB) of the Superfund Section of the Division of Waste Management of the North Carolina Department of Environment and Natural Resources has reviewed Rowan County tax records that indicate you may own property at the above referenced location. This review was conducted as part of a "Water-Supply Survey" of select parcels along or near Statesville Boulevard in Salisbury, Rowan County. At the present time, the IHSB has been unable to definitively determine the source of drinking (potable) water at your property.

During the assessment and cleanup of a petroleum release from an underground storage tank system along Statesville Boulevard, hazardous substances that appear unrelated to petroleum were reported in groundwater from several water-supply wells in the surrounding area. The origin and current configuration (lateral and vertical extent) of the plume of groundwater contamination is not presently known.

The purpose of this letter is to request your participation in a Water-Supply Survey. The results from the survey will assist the IHSB in determining the source of potable water at properties that are currently improved and occupied within the proposed study area. This information will also allow the IHSB to focus efforts to secure funding for sampling and analyses of groundwater from select water-supply wells in the general vicinity of your property. If groundwater from residential water-supply wells has concentrations of hazardous substances above drinking water standards, the IHSB will solicit financial aid for property owners if they choose to connect to municipal water. **The success in obtaining funding to sample water-supply wells and financial aid to assist property owners in connecting to municipal water may be dependent on your participation in this survey.**

Please complete the enclosed Water-Supply Survey by indicating the current source of potable water at your property, if your property is improved with buildings and structures, and if your property is currently occupied. If the source of water at your property is groundwater from a water-supply well, please attempt to answer the

Re: **WATER-SUPPLY SURVEY**  
215 Wilton Lane  
Salisbury, Rowan County, North Carolina  
Parcel ID #329 131

Dear Property Owners:

The Inactive Hazardous Sites Branch (IHSB) of the Superfund Section of the Division of Waste Management of the North Carolina Department of Environment and Natural Resources has reviewed Rowan County tax records that indicate you may own property at the above referenced location. This review was conducted as part of a "Water-Supply Survey" of select parcels along or near Statesville Boulevard in Salisbury, Rowan County. At the present time, the IHSB has been unable to definitively determine the source of drinking (potable) water at your property.

During the assessment and cleanup of a petroleum release from an underground storage tank system along Statesville Boulevard, hazardous substances that appear unrelated to petroleum were reported in groundwater from several water-supply wells in the surrounding area. The origin and current configuration (lateral and vertical extent) of the plume of groundwater contamination is not presently known.

The purpose of this letter is to request your participation in a Water-Supply Survey. The results from the survey will assist the IHSB in determining the source of potable water at properties that are currently improved and occupied within the proposed study area. This information will also allow the IHSB to focus efforts to secure funding for sampling and analyses of groundwater from select water-supply wells in the general vicinity of your property. If groundwater from residential water-supply wells has concentrations of hazardous substances above drinking water standards, the IHSB will solicit financial aid for property owners if they choose to connect to municipal water. **The success in obtaining funding to sample water-supply wells and financial aid to assist property owners in connecting to municipal water may be dependent on your participation in this survey.**

Please complete the enclosed Water-Supply Survey by indicating the current source of potable water at your property, if your property is improved with buildings and structures, and if your property is currently occupied. If the source of water at your property is groundwater from a water-supply well, please attempt to answer the

Re: **WATER-SUPPLY SURVEY**  
Perryman Drive  
Salisbury, Rowan County, North Carolina  
Parcel ID # 330 098

Dear Property Owners:

The Inactive Hazardous Sites Branch (IHSB) of the Superfund Section of the Division of Waste Management of the North Carolina Department of Environment and Natural Resources has reviewed Rowan County tax records that indicate you may own property at the above referenced location. This review was conducted as part of a "Water-Supply Survey" of select parcels along or near Statesville Boulevard in Salisbury, Rowan County. At the present time, the IHSB has been unable to definitively determine the source of drinking (potable) water at your property.

During the assessment and cleanup of a petroleum release from an underground storage tank system along Statesville Boulevard, hazardous substances that appear unrelated to petroleum were reported in groundwater from several water-supply wells in the surrounding area. The origin and current configuration (lateral and vertical extent) of the plume of groundwater contamination is not presently known.

The purpose of this letter is to request your participation in a Water-Supply Survey. The results from the survey will assist the IHSB in determining the source of potable water at properties that are currently improved and occupied within the proposed study area. This information will also allow the IHSB to focus efforts to secure funding for sampling and analyses of groundwater from select water-supply wells in the general vicinity of your property. If groundwater from residential water-supply wells has concentrations of hazardous substances above drinking water standards, the IHSB will solicit financial aid for property owners if they choose to connect to municipal water. **The success in obtaining funding to sample water-supply wells and financial aid to assist property owners in connecting to municipal water may be dependent on your participation in this survey.**

Please complete the enclosed Water-Supply Survey by indicating the current source of potable water at your property, if your property is improved with buildings and structures, and if your property is currently occupied. If the source of water at your property is groundwater from a water-supply well, please attempt to answer the
